

10th October, 6 hours. My peer and I divided the assignment into smaller more manageable tasks. In addition, we have done a Dropbox account in order to upload the work that we have done it so far so we can refer to it and add things and edit it while we at home. I had to make the buttons for the different functions using JavaScript. For example I would make a home button link them to HTML buttons.

15th October, 1-2 hours. I started writing down how I wanted the layout of the facilities' and rooms' description. I was looking for similar sites, comparing them with my ideas and finally trying to implement that.

17th October, 2 hours. I started writing the description of the hotel, facilities, rooms and services, integrating them into JavaScript.

18th October, 1 hours. Collaborated with my peer and combined the code.

20th October, 2 hours. I began writing the basic CSS for layout.

24th October, 3 hours. Tried to correct CSS errors and implement wrapping boxes around each page.

25th October, 1 hour. Collaborated with my peer and combined the code.

26th October, 5 hours. I edited the CSS that is used by images. Tried to make them enlarged on click, which lead to the discovery of Fancybox plugin.

27th October, 2 hours. I used the Fancybox plugin to enlarge the thumbnails on click. Changed the code for images to be using the plugin.

1st November, 1 hour. The website was mostly finished, yet there were some errors present. Planned to fix everything tomorrow.

2nd November, 5 hours. Corrected all errors, finished testing with Internet Explorer, Microsoft Edge, Google Chrome and Safari.

4th November, 1 hour. Finished the documentation.

Note: Each time the code was modified and saved into the Dropbox. Both me and my peer were communicating using VoIP.
